Roscore Daemon

Some may find it convenient to have roscore automatically launched as a system service on startup. To do this:

```bash
gem install robot_upstart
rosrun robot_upstart install --job roscore robosub/launch/roscore.launch
```

Once installed, you can use the normal service tools to manage the service:

```bash
sudo service roscore status
sudo service roscore start
sudo service roscore restart
sudo service roscore stop
```

To uninstall the service:

```bash
gem uninstall robot_upstart
```
