USB Setup

To cause USB devices to show up as a special name (i.e. /dev/sensor_microcontroller instead of /dev/ttyUSB0), we need to modify our UDEV rules.

First, open up

```
/etc/udev/rules.d/50-usb.rules
```

Then add a line for the USB device, such as

```
SUBSYSTEM="tty", ATTRS{idVendor}="2a03", ATTRS{idProduct}="0043",
ATTRS{idSerial}="41", SYMLINK="sensor_arduino"
```

To properly identify the vendor ID, product ID, and serial number, you should run

```
udevadm monitor --attribute-walk [port]
```
