2025/08/08 11:08 1/1 Interface Converters

Interface Converters

Project Lead: Brian Linnenkamp

Overview

Interface converters provide a means of communication from the main computer to peripheral microcontrollers. Interface converters are responsible for translating USB communications into UART, SPI, and any other serial communication protocol required.

Timeline

- 1. Creation of Schematic (October 9th)
- 2. Footprint Association and Part Selection (October 15th)
- 3. Figure out driver dependencies (October 25th)
- 4. Routing the PCB (November 10th)
- 5. Revise (November 15th)
- 6. Determine interface functions to use (November 21st)
- 7. Order PCB (November 21st)
- 8. FT232H Driver interface functional (January 15th)

Design

The interface converter will allow for two different means of connecting to it: either through a female mezzanine connector or alternatively through a female connector to a cable harness as specified by the harnessing project.
